

With more than 25 years of experience, new challenges have emerged and the search for growth and professionalism has been achieved through a revitalizing brand name change.

Growth and international development are part of our vision, which we have achieved with a strong presence in Mexico, thus continuing internationally. Our approach offers experience, highly trained personnel and mechanized equipment with the latest technology. These elements shape a solid foundation for our company and in each project, we reflect our vision, with higher performance levels than our competition.

We have the experience, the work team and the strategies to achieve our plans and we would like you to be a part of this new project.

OUR CLIENTS...

Within our main clients are the most important railroads in Mexico:

EXPERIENCE . . .

As a construction company, we have been involved in various projects in areas such as:

- ✓ **RAILROAD INFRASTRUCTURE**
- ✓ **HYDRAULIC/SANITARY INFRASTRUCTURE PROJECTS**
- ✓ **COMMERCIAL EDIFICATION AND SERVICES**
- ✓ **CONCRETE AND STEEL STRUCTURES**
- ✓ **EARTHWORK AND PAVEMENTS**
- ✓ **MARITIME PORT PROJECTS**

EXPERIENCE . . .

We have completed the following in the railroad industry over the past 9 years:

Track construction and renewal	+ 2,000 km
Maintenance Work	+ 3,000 km
Alignment, levelling, stabilization and tamping	+ 5,000 km
Concrete ties replacement	+ 1,500,000 pcs
Wood ties replacement	+ 800,000 pcs
Welding	+ 10,000 welds
Turn-outs & switches	+ 500 sets
Ballasting of tracks	+ 1'500,000 M3
Bridge construction and repairs	+ 4,000 LM in 34 bridges
Hydraulic concrete structures	+80,000 M3

MISSION:

We are a Mexican company, with the adequate infrastructure to undertake the maintenance and support work for civil engineering projects in the railroad industry. We pride in providing quality solutions for each project responsibly.

VISION:

To consolidate the company as dependable provider of civil engineering services within the railroad industry in order to undertake international projects.

OUR CORE VALUES:

Honesty and respect toward our clients and members of our company. We pride in establishing a commitment to our clients and suppliers.

Security is one of our most important values. We seek the development of optimal methods to provide and fulfill adequate standards for each project.

We are efficient in each individual process and project.

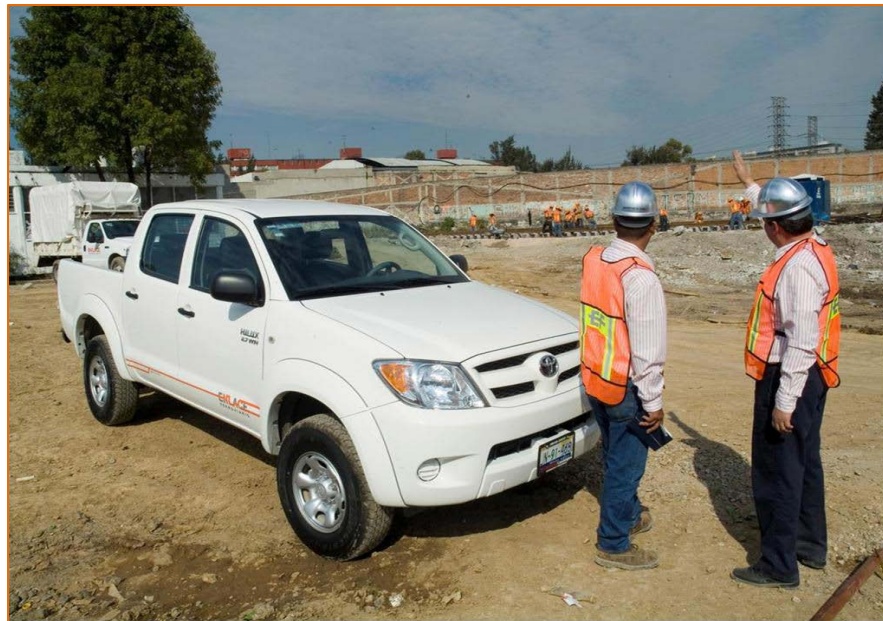

We aim to satisfy our clients with the highest quality service.

PHILOSOPHY:

We believe in efficiency and the projection of our Company, founded by a qualified team, who is trained to provide tangible solutions.

SOCIAL RESPONSIBILITY:

We are involved in the growth and development of the railroad industry. We have created more than 15,000 sources of employment in Mexico since our foundation. Our commitment is to provide security and confidence as a benefit to our clients and users.

OUR WORK

Construction and renewal of railroad tracks

We have constructed and/or renewed more than 2,000 km of railway within Mexico in the past 8 years for a variety of railroad concessionaries. We have successfully completed work in arid, semi-desert, tropical and forest regions.

Maintenance and conservation of railroad tracks

We have completed corrective and preventive maintenance for the various railroads in Mexico, having changed ties, rails and fastening material.

We offer maintenance equipment such as tie inserters and tie handlers, birial cranes, birial traction equipment and Brandt Power Units, among others.

Alignment, levelling, stabilization and tamping

We own equipment for alignment, levelling, stabilization and tamping as a mechanized system.

We also own Harsco Track Technology MARKIV Tamper machines and Knox Kershaw Balast Regulators, giving maintenance to more than 5,000 km of the Mexican railroad main lines.

Dynamic Track Stabilization

We own Harsco TrackDynamic Track Stabilizers type TS-30, to restore the railroad lateral resistance loss. This resistance loss is originated by maintenance operations which alter the balast section, such as tamping, the replacement of ties or the balast cleansing.

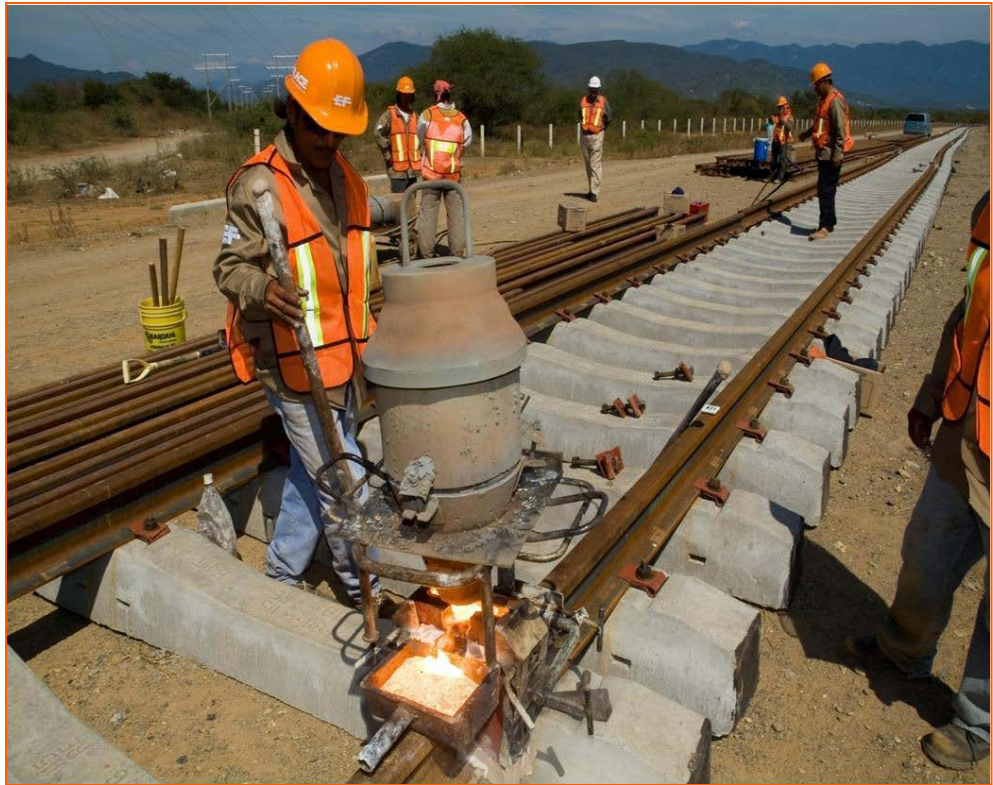

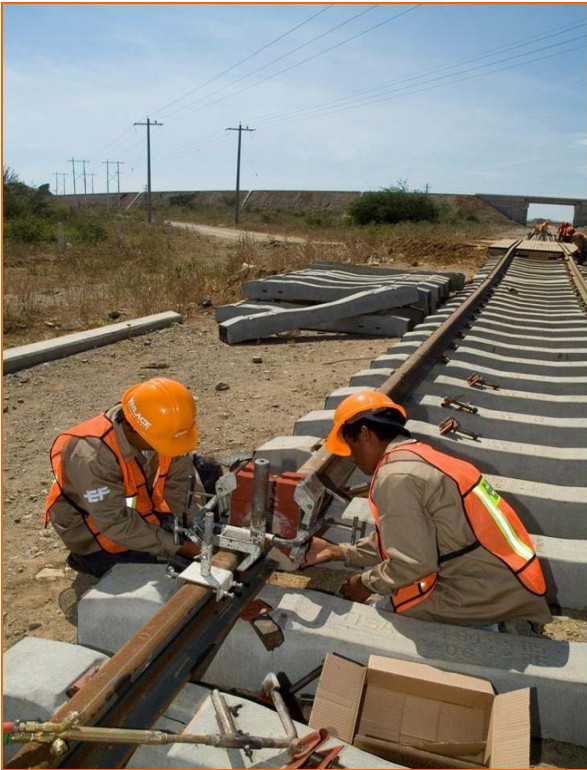

Ultrasonic Rail Inspection and Testing

Within the preventive maintenance work we do, we also inspect rails using ultrasound technology vehicles from RTI for the timely detection of internal rail defects. When done properly, these maintenance operations can prevent derailments which can cost railroads millions of dollars.

Welding

We have highly trained personnel to perform welding in rails. Within our rehabilitation and track conservation projects, we have applied more than 10,000 aluminothermic rail welds.

Grinding

We also have available a MECNO SERVICE self propelled rail grinder that we use to restore the profile and remove irregularities from worn rail track to extend its life and to improve the ride of the rolling stock that uses the railway.

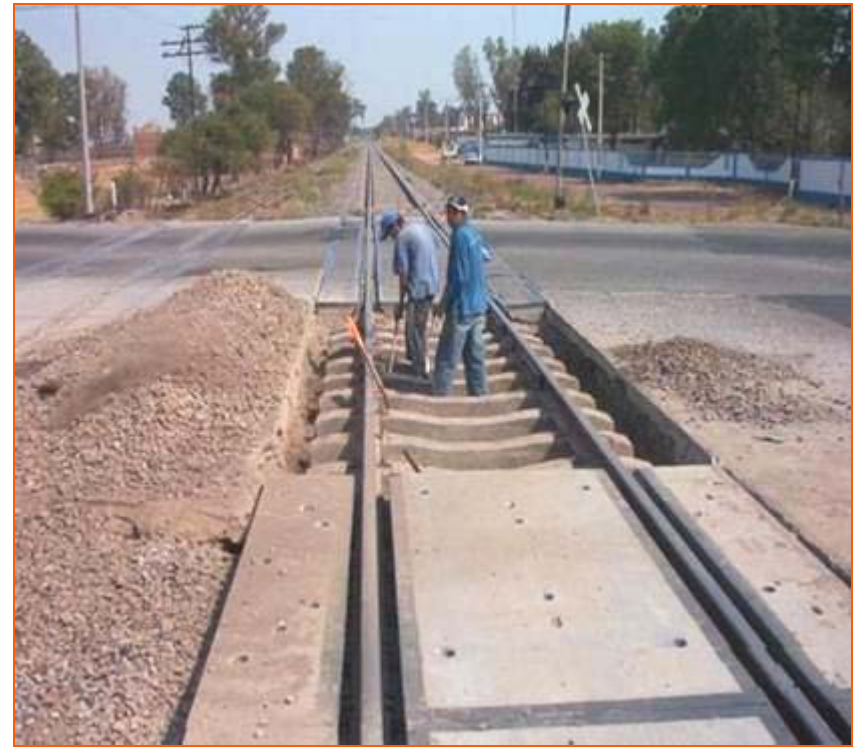

Turn-outs & switch Installation

In yard work and its reconfiguration, the construction of auxiliary and secondary tracks, and in private industry railroad tracks. We have provisioned and installed a great number of railroad turn outs and switches. Our technical personnel have ample experience and knowledge in the installation of these railroad devices.

Construction of Auxiliary Projects

We have performed auxiliary projects for railroads, such as construction of structures and drainage projects, slope stabilization with ground anchors and shot concrete, ground movements, pavements, and construction of railroad crossings among others.

Construction of Structures and Railroad Bridges

Construction of Structures and Railroad Bridges

We have constructed and rehabilitated railroad bridges, both concrete as well as steel structured, in addition to bridges with wooden structures.
